

分组背包

人员

洪晨栋、洪晨棋、郭栩睿、于霄龙、于家瑞 到课

上周作业检查

上周作业链接: <https://cppoj.kids123code.com/contest/2580>

The screenshot shows a competition results page with a table of scores. The table has columns for rank (#), username, name, programming score, time, and five problems (A, B, C, D, E). All participants scored 100 on every problem.

| # | 用户名 | 姓名 | 编程分 | 时间 | A | B | C | D | E |
|---|--------------|-----|-----|------|-----|-----|-----|-----|---|
| 1 | yujarui | 于家瑞 | 400 | 484 | 100 | 100 | 100 | 100 | |
| 2 | taohuisheng | 陶汇笙 | 400 | 968 | 100 | 100 | 100 | 100 | |
| 3 | yuxiaolong | 于霄龙 | 400 | 972 | 100 | 100 | 100 | 100 | |
| 4 | guoxurui | 郭栩睿 | 400 | 972 | 100 | 100 | 100 | 100 | |
| 5 | wangenze | 王恩泽 | 400 | 1012 | 100 | 100 | 100 | 100 | |
| 6 | cuchenhe | 崔宸赫 | 400 | 1012 | 100 | 100 | 100 | 100 | |
| 7 | hongchendong | 洪晨栋 | 100 | 49 | 100 | | | | |

本周作业

<https://cppoj.kids123code.com/contest/2680> (课上讲了 A ~ C 这些题, 课后作业是 D 题)

课堂表现

今天给同学们讲了分组背包这个内容, 课上反映出来的一个问题是同学们 vector 数组用的不是很熟练, 还需要再针对 STL 多加练习

课堂内容

通天之分组背包

分组背包 模板题

```
#include <bits/stdc++.h>

using namespace std;

const int N = 1000 + 5, M = 100 + 5;
struct node {
    int c, v;
};
vector<node> vec[M];
int f[N];
```

```

int main()
{
    int n, m; cin >> m >> n;
    for (int i = 1; i <= n; ++i) {
        int c, v, id; cin >> c >> v >> id;
        vec[id].push_back({c,v});
    }

    for (int i = 1; i <= 100; ++i) {
        for (int j = m; j >= 0; --j) {
            for (node it : vec[i]) {
                if (j >= it.c) f[j] = max(f[j], f[j-it.c]+it.v);
            }
        }
    }
    cout << f[m] << endl;
    return 0;
}

```

[HAOI2012] 音量调节

$f[i][j]$: 考虑完前 i 个数后, 能否变成 j 音量

```

#include <bits/stdc++.h>

using namespace std;

const int N = 50 + 5, M = 1000 + 5;
bool f[N][M];

int main()
{
    int n, sv, limit; cin >> n >> sv >> limit;
    f[0][sv] = true;

    for (int i = 1; i <= n; ++i) {
        int x; cin >> x;
        bool flag = false;
        for (int j = 0; j <= limit; ++j) {
            if (j-x>=0 && f[i-1][j-x]) f[i][j] = true;
            if (j+x<=limit && f[i-1][j+x]) f[i][j] = true;
            if (f[i][j]) flag = true;
        }

        if (!flag) { cout << -1 << endl; return 0; }
    }

    for (int i = limit; i >= 0; --i) {
        if (f[n][i]) { cout << i << endl; break; }
    }
}

```

```
    return 0;
}
```

[USACO03FALL] Cow Exhibition G

f[i]: 当智商是 i 时, 情商最大是多少

智商可以是负数, 所以需要加一个偏移量

```
#include <bits/stdc++.h>

using namespace std;

const int maxn = 4e5 + 5;
const int inf = 0x3f3f3f3f;
int p[maxn*2], f[maxn*2];

int main()
{
    memset(p, -0x3f, sizeof(p)); memset(f, -0x3f, sizeof(f));
    p[maxn] = 0;

    int n; cin >> n;
    while (n -- ) {
        int a, b; cin >> a >> b;
        memset(f, -0x3f, sizeof(f));
        for (int i = 0; i < maxn*2; ++i) {
            f[i] = max(f[i], p[i]);
            if (i+a>=0 && i+a<maxn*2) f[i+a] = max(f[i+a], p[i]+b);
        }
        memcpy(p, f, sizeof(p));
    }

    int res = -inf;
    for (int i = maxn; i < maxn*2; ++i) {
        if (f[i] >= 0) res = max(res, i-maxn+f[i]);
    }
    cout << res << endl;
    return 0;
}
```
